### EXAMINER'S STATEMENTS OF REASONS FOR ALLOWANCE

1. Claims 1-4, 6-10, and 13-31 are allowable over prior art references because related references do not disclose a transmitter for upconverting a baseband signal comprising: a first switch for sampling a non-inverted baseband signal according to a control signal; a second switch for sampling an inverted baseband signal according to a control signal; and combining the first sampled signal and the second sampled signal.

### *Conclusion*

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Clemens (U. S. Patent No. 4, 286, 283) and Van Gerwen et al. (U. S. Patent No. 3, 737, 778) both disclose sampling an inverted and non-inverted modulated signal and combining the signals in a receiver. However, neither disclose the process performed in a transmitter with upconversion of a baseband signal or the sampling is performed on a baseband signal by switches.
